

Client closes randomly

Posted by evilminer - 2014/05/16 05:11

My Eve client gets closed randomly, i have no idea why :)

Eve Miner restarts the Eve client again. Sometimes it takes 1 min sometimes it takes 5 min.

Which logs can i send where to analyze this?

Thanks

Check that you use latest version of the bot 6.7.4
Record log as per link in my signature and send it to me.

Guys, I need log file in order to fix any bugs in the bot. Nobody, even myself, can help you if you dont produce detailed information about errors. In my own test everything works and I have to fix bot while looking into logs.

Yes i understand ;)

I will send you the logs monday, i dont have access to that computer at the moment.

having the same kind of issue. undocks, replaces station BM, switches to looking at belts and sorts them. It then picks belt whatever idols and crash. but it did get thro a first run without issues and created the SN. log will be sent in a few min.

its only on auto-create new bookmarks. if you set them up manually, or use existing systems its fine.
