

EVE start delayed because of DT in progress.

Posted by STALLION - 2014/12/17 05:14

Hey all,

After the first run completed successfully for both accounts, I try to start mining by pressing continue and I get the message:

"EVE start delayed because DT is in progress". Please note that DT has passed hours ago.

Any idea about this message?

Thanks :)

Idea is to set timezone properly in your date time settings. Also you can set timezone to UTC time and synchronize computer time with eve server time.

UPDATE:

Hey slav2,

Just a quick note to let you know that this problem is solved with your latest update. Didn't do anything with the PC's clock and I am not sure if the VGA's driver update did anything about it.

Keep up the great work :)
