

## Loop after starting EVE (Miner)

Posted by Loser-noob - 2020/10/28 05:06

---

Hello everyone,

Eve Miner doesn't mean well to me.

After the updates over the last few weeks everything went well. Unfortunately not anymore.

The only changes are:

change from alpha to omega

Ship from Venture to Covetor

Both ships with minimal fitting (Miner, Upgrade 2 in the highest possible form)

Now the Eve is started, but various windows are opened and closed. Then Eve will stop and start again.

This then repeats itself indefinitely.

do I have to change something in EvePilot for my changes in the game? I don't know what and where I can or have to adjust something in the settings.

Does anyone else have such problems and can clear up me?

Addendum:

after repeating the first run several times, everything works as usual.

However, there were some error messages during the first run. at some point it worked.

i am happy, Slav did a good job and everyone is satisfied. It was more likely a user error.

I have learned that after making any significant changes to my character or activity, to redo the First Run. This usually solves most issues.

I've learned that too. Nevertheless, I have left the post here and supplemented it so that others with this problem can learn from it.
