Attended Botting
Posted by C4M_EVE - 2021/03/27 17:48

Hey everyone. I'm was hoping to get some advice on how useful this application is for attended botting. I telework a lot these days and I'd love to be able to absentmindedly mine with my two existing accounts (maybe get a 3rd) on my laptop while emailing/Webexing on my desktop. I'm not talking about 8 hours a day. Maybe 4? And I'd hop on every now and again to chat and browse the market/buy things. Do I need to follow all these extra precautions like using VMWare and throw away accounts? I'm not trying to make a farm, or even afk bot for that matter, just looking to minimize my clicking while I work. Appreciate any advice anyone has for this type of use case.

Well ofcourse the human interaction will make it better disguised so they cant detect a pattern, also mining is one of the safer botting activities due to many allready afk mine.

However you will allways run a risk so aslong you are clear on that u should be fine I guess ?

CCP banned miners in the past like 3+ years ago when average online was 2x from now. But now they mostly concentrate on RMT bot farms and miners rarely used in RMT.
