

First Run - Not working

Posted by iskydare - 2021/06/15 17:26

Greetings,

I am having problems with miner not logging in and working. I decided to run first run to see if it would fix issues.

First run does not work. It loads launcher but does not select character name to enter game. I have uninstalled eve and evepilot completely and re-install and still does not work. I have removed all characters except one character and still does not work.

I keep getting the following spam in the logger window... It just spams this nonstop. It doesn't appear to detect the eve launcher.

```
20:18:54 (189) Waiting for eve launcher window, Func : EVELauncher
  20:18:54 (189) Launcher window = null, unlogic condition, Func : EVELauncher
  20:18:54 (189) SS: C:Users*****AppDataLocalMacroLabEve
PilotErrorHandlerEVEPilot-10.5.8.0-EVELauncherNULL-2021-06-15_20-18-54.bmp, Func :
DbgSSCapture
  20:18:54 (189) Total exe file processes count: 0, Func : EVELauncher
  20:18:54 (189) New exe file processes: 0, Func : EVELauncher
  20:18:54 (189) Process not started/detected yet, Func : EVELauncher
```

The is launching the window and characters are there to be selected. I look at the screen shot taken and it clearly shows the launcher window with characters.

Any advice on how I can atleast remove everything and reinstall evepilot?

It works just fine on two of my pc, just not this one? Is Slav still around?

I will need to check your windows data when launcher is started. Pause and close bot when you see launcher. Start bot again. In menu->tools-> click button test stand.

https://www.macrolab-online.com/kuploads/images/test_stand-20210618.jpg

Save file as txt and send to my mail. This is not a bot problem, you have another third party tool which

modify eve launcher somehow. I can adopt bot if you send me details

I emailed you the file. I'm looking to see what third party programs I could have running. I don't really install anything and this is a custom built rig so it does not have software from dell, or HP, etcetera. I did install CCleaner recently to clean out my registry and remove some stuff, but then I uninstalled it.

Received your file, but there is no data about eve launcher window. Start eve launcher, wait while it is completely loaded and record data again.

Any luck on the second file? Worse case I guess I will have to reload windows if I can't figure out what third party software is messing with evepilot.

Check new 10.5.14 version. Something changed title of the eve launcher window on this machine. Report in case of problem.

Re: First Run - Not working

Posted by iskydare - 2021/06/29 15:12

Greetings, have been gone for several days but am back now.

After downloading latest version of the bot, I am running 10.5.25.0, first run is still not working. It now goes all the way into the game and it stops working on settings tab.

I get multiple failures of not finding even settings window. Then bot tries to select dark matter theme, but clicks on Mordu's Legion theme which is one theme above Dark Matter. Bot then goes to move the transparency slider and after that I get error of not finding settings window and bot gives popup box to fix ui/scaling in windows to 100%. I have checked and I have correct settings. I have updated all my drivers, and rechecked everything.

Any tips to get first run to work please? I has been weeks now and I can't get bot working on pc.

Please let me know what information you need me to submit to help fix.

Thank you,

=====

Record and send log file please as per link in my signature. Also open data folder of the bot (via menu->tools->open data folder) and send me errorhandler folder content. Zip it first. You have different theme from standard windows theme. I have tried to adopt bot for different windows parameters (border widths, header heights etc), but seems in your case something is not taken into consideration. And you are not telling what is this. Contact me in telegram

Slav, you were right as always. I kept trying to hunt down the third party software messing with theme. Could not find it. I tried manually switching windows 10 theme to default and still would not work. I just went and did the windows reinstall and set settings to default. This fixed problem! First run worked perfectly.

I wish we could have found the exact issue but I didn't want you to waste your time if it was my fault with something in windows. Thank you for all your help!
