

I can translate UI with google and switch DE to CN. Germans mostly english speaking people and, I believe, forgive me for that.

What Chinese version do you need? Traditional or Simplified? I have no ideas what is the best

Traditional:

Google UI DE CN。 。

Chinese 。

Simplified:

Google UI DE CN。 。

Chinese 。

Do you understand both?

Simplified is best

Traditional can also understand

Chinese people can understand simplified and traditional

Other Asian groups can understand traditional Chinese

Simplified characters are new fonts that are spreading widely, while traditional characters are old fonts

Hope this information can help you

Uploaded test version with Chinese selector. Switch to Chinese. You will find EVEPilot_CN.whl file in the archive. This is translation file with english-chinese pairs. Check translation, edit file to achieve better result and send it to me. I will include it in release and we will start work on manual.
