

#### 4.10.4.0 Courier stuck. Can't see Distance header

Posted by greatrsg - 2012/08/16 16:34

---

My courier runs fine for some hours and then I find it hanging in space and the "Distance" column in the overview has become shrunk down to just a "Di". This means the Pilot cannot find that column and is looping continually.

Since my computer is completely untended when this happens, I can only assume the Pilot is clicking somehow in a way that shrinks the column. Pausing the Pilot and resizing the column fixes things, but a few hours later it will be stuck again with the same problem.

I have had the same problem too. This is due to the mouse double clicking the distance tab which minimizes the tab, unlike two individual clicks which sorts the distances of objects in the column. The way to solve it is to do three things in shared settings.

- 1) Increase the delay for mouse movement to slowest = 100
- 2) Increase the pressure click of the mouse to greater than 1000ms = 1s
- 3) Increase the delay time after every jump to 2 to 5 secs at 100% occurrence.

In this way, eve game lag does not cause the courier to double click the distance tab, instead registering the clicks as tow separate clicks.
