

Loyalty Point efficiency?

Posted by cippy - 2015/06/28 10:06

Is it faster to make loyalty points running only level 4s, or should I set the bot to do level 3s and 4s?

Obviously L4.

Can fine tune the efficiency in the settings. If you watch it while it works, you'll notice it declining low profit missions.

Some corporations have very few level 4 agents in highsec though, which is why I was wondering if level 4s were still the most efficient way to make LP when there's a limited number of agents?

I think 4th lvls are fastest way to get LP leveled, besides if your cargohold volume is small or, as cippy wrote, you have not so much agents of 4 lvl available. 3lvl missions give approximately 1/2 of LP of 4th lvl mission. I doubt bot will make 2x3lvl faster then 1x4lvl

If there is only one high sec level 4 agent but there are multiple high sec level 3 agents then running the

level 3s will at least be safer!

Speaking of LP efficiency..

It is clear that running lvl 4 missions are superior in LP gain if your standings prerequisite is met. What I would like to know if running missions strictly for ONE corporation or MULTIPLE corporations, in the same area, is more effective overall in ISK gain through LP Store.

Better to do multiple selected corporations. Check LP rate for selected corporations e.g. here. It is russian website, but quite simple to use w/o translation.

english one

<https://www.fuzzwork.co.uk/lpstore/>

sometimes it changes due to scams so always keep ur watch on that
