

Stuck

Posted by EC78 - 2018/01/14 18:59

Hello Guys,

I have a wierd situation some times.

My courier bot is runing fine, but sometimes if i check i see the overview window is closed and the bot is clicking in empty space. If i open the overview manually the bot close the window and clicking again the nothing.

Anyone see this problem before?

Another questions.

Im new with this bot, so sorry if i questioning idiot thing.

Sometimes i read here the bot can buy implants. Where can i setup this option?

What is the better setup at start:

run only lvl 1 mission and if all agent give lvl 2 change only lvl 2,

or

run lvl 1-2-3-4 at the same time?

Thx for all help and sorry my terrible english

EC

Do you use VMWare?

Bot is not buying implants, but may transport them to home station. You may generate shortest route to visit stations of selected corporations with "LP path" button

http://www.macrolab-online.com/knowledgebase/scr/images/courier_bot_selected_corporations.png

Select level based on your faction standing. Don't enable agent levels you cannot run yet. Bot will waste time visiting unavailable agents

HEllo Slav!

Thx the answer, yes im use VMWare.

Thz the help for understand lp path thing.

I use your tutorial setting the courier bot, and i understan need tick only the available agent level in the setup. But example if some agent give lvl 4 mission some give lvl 3, better if i run only lvl 3 mission, or better i run mixed lvl 3 and lvl 4 agent?

The story line mission need manual complete?

Another question, as i see now.

My miner is not equip the mining laser, if it try and drop the cristal in the laser the pop up window say: No room for more in destination container. If i pull the crystal manual, working fine.

Thx again

Same here...overview window is sometimes closed and bot is clicking in space

Im not sure why...happened the last 2 days.

Try to reduce mouse speed if you increased it. Set immediate interval in first run settings. Also you may try to add delay after mouse clicks. This is a mouse problem, it misclicks if mouse is lagging under VMWare

Better to run 4 lvl agents if you have more then 10 available agents of 4 lvl. 4th missions give 2x reward.

The story line mission need manual complete?

Courier and trade story line missions may be completed with bot. You need to put ore to home station to do trade missions.

My miner is not equip the mining laser, if it try and drop the cristal in the laser the pop up window say: No room for more in destination container. If i pull the crystal manual, working fine.

Crystals are used with modulated strip miners only

Hello Slav

Thx again the answers. I do a first run and the courier click problem is solved.

Ofc i use modulated strip miner. And i do a first run, but not helping, i try the reduce mouse speed.

thx

I just had the problem again.

The Overview window was still there, but the "selected target" window was missing and bot did nothing. I clicked manually where it should be and the window reappeared and the bot started working again, but a few seconds later, the whole eve window was kinda black, all letters transformed in dark boxes...ever heard about that?

Yes, this is old eve problem. I am not sure how to deal with it. Try eve client reinstalling and updating your video drivers.
