

No UN-docking

Posted by Loser-noob - 2020/03/20 03:55

Hello everyone,
the Salvager bot has been refusing to dock for some time.
The local is always quite full (30+). Can that be because?
Settings were not changed.
Only the game and Windows were forced to switch to 64 bit.
Does anyone have any idea what it could be?
best regards

Addendum:
it was really because the local was too full.
Everything works in a system with less.
