

## docking when avoiding

Posted by matstocks - 2013/10/08 10:33

---

When hunting at anomalies, i arrive at the belt but if a friendly (who i have set to avoid because of the first come first serve rule) is there, i dock up and the client closes, reopens and starts again. Is there not a way to make the client just warp to a different anomaly rather than docking up each time?

I am aware about this and changed this behavior in newer (not published) version. Try to not bookmark station itself. Bot should not see docking option in right click menu of a station bookmark.

ah ok, so change the station bookmark to a safe spot and this should work ok?

can you recommend how i should set up bookmarks for automatic anomaly hunting? curenly i have 00-Safe setup by myself, and the program sets up 01-Anomaly

however, if an enemy comes into local the first thing it does is try and warp to the safe spot (which is fine) but then warps to the station, which might be a problem, if he is camping the station.

what would you suggest?

Bot does not use safespot bookmarks. You can use station bookmark or POS bookmark only.
