

Unstuck process not working in POS

Posted by Eveman99 - 2013/12/01 03:46

Dear Slav,

your "unstuck" subroutine is not working when the ship is in POS as only big rocks are used for unstuck.

Could you please include the POS tower into the unstuck process ?

Will add tower, corp hangar and assembly array to the list. Station is not added. In case of a problem with particular station we can add a delay after undock.
