

## Huntbot Error log-off.

Posted by dhussey - 2014/03/08 15:46

---

The huntbot logs off after reaching a belt.

It is set to use 2 BM's in protection mode.

Basically, the errors read that it "local is closed", but it has brought up the bookmarks... then switches to local chat, and error reads that "approach not found"... its basically looking to the wrong window in eve. When it brings up local, you can see the mouse move to where the bookmark 2 would be, and it right clicks as if to check for the "approach" string so that it knows its at the belt.

It then logs off due to either it thinking its not at belt or that it failed its local check.

This is occurring as I have it set to "orbit NPC". Otherwise, it works if I have the bot not move at all.
