Is HuntBot still working?

I'm thinking of coming back to the game and wanted to give an anom bot a try. I read that a lot of botters got banned recently and most of the ratting bots are broken. Is HuntBot still working?

About bans, lets separate solo botters and farmers. Those who has more then 2 accounts need to know how to avoid ban chance multiplier as having several linked bots is a huge flag for CCP to get attention. Initial flag bot or not bot is set based on statistics. If you switch activities (mining, hunting, courier missions) once a week you will never be banned. Do other things manually. Open activity tracker and check what can be leveled. BPO research or manufacturing, just traveling to a system you never visited will help to avoid ban.
