

bot will not finish anom

Posted by Rourkie - 2021/01/01 00:45

can some one help me with what im doing wrong,

im myrm ratting, in forsaken hubs.

i have followed the guide to the letter done multiple "first stats" and still the bot will warp in and do every thing perfect but will leave after the first wave is completed and starts attacking the second.

there was no change in local. nothing that i can see that would cause a recall on the drones and warp back to station.

guide i followed was <https://www.macrolab-online.com/knowledgebase/index.htm>

any help would be great,

thanks

all sorted now, seemed that the targeting distance had a role to play, even though i wasnt using guns ect, push that setting right out and no issues, made 400mil today.

cheers

Hi. Can you plz tell me witch type of Filament and Tier you are use.

400 Mil in 24 hours ?

That would be great.
