

Not Launching Filament

Posted by Pronator - 2021/10/14 05:59

I have sent log file but no response yet. Warping to BM but then just warps back to station and logs off. Not even attempting to use filament.

I have don FR several times, sat and watched bot, tried other algorithms ...

Completed another first run this morning. Checked all my settings with a fine tooth comb, and now it is saying it can't connect to remote server.

wtf

About 8 or so hours ago I was unable to use the macrolab site and the bots wouldn't start due to that server issue. Maybe the server that slav uses had to restart and it caused some issues or something, not sure. Couldn't start of my bots up before heading to bed.
