

Something is wrong ...

Posted by Pronator - 2021/11/07 01:34

I don't know what is going on with my Abyss Hunter, but even after several First Runs, it just seems to get into the Abyss and then shit itself.

It's not locking enemies, it's spam-orbiting cache's and then selecting an enemy to orbit again.

It gets in, deploys drones, then does any of the above, but it is NOT jumping through the gates ...

Has anyone else experienced this?? If so, what was your fix?

Try to start bot when nothing is opened on your desktop. Sometimes half transparent windows add artifacts to screenshots bot record. Redo first run, then send me log file if you have problems
