

Default orbit distance

Posted by dlq3899 - 2019/11/30 04:25

Does the bot change the default orbit distance? Because i want to add guns to my ship which has a 8km optimal range and i always have to change it by hand when the bot restarts the game since the orbiting option doesnt do it. It just clicks the orbit button and it stays default at 15km

Edit: it changes the orbit to 3k when i use the tristan auto fit, do i need a new first run or forcr fit for it to change to the value i want?

In game settings are set and saved during first run. Redo first run with new setting.

Thank you! Also is it possible to add to the bot to automaticly press yes and dont show again on the warning on entering low-sec? Im using a high sec station since its cheaper so when i blow up it sends me back and the bot sometimes restarts the game and cant go back to low sec

Better to pause bot during first run after final dock. Go to low sec manually and confirm and don't show again this warning. Then dock and unpause bot. Bot will save this state for future use.

Bot should click OK to enter to low sec. If you have problems with this, record log file and I will check what is wrong. How to record log is in my signature.
