

Bot fails to set 000 in mail field

Posted by francx - 2020/05/08 17:56

Hi,

Since the patch, I have been unable to run the FW bot. It starts and gets to the point where it would normally enter 000 in mail text and then hangs without typing.

Running the log viewer shows "Failed to get system list"

I have re-ran First run, but problem re-occurs.

Log files will be sent.

Thanks.

This might be a problem with eve API server. I will check if anything changed and bot needs correction.

Good Afternoon.

Following the bot update today, this issue has reoccurred.

Thanks,

Please check if ESI server online before posting.

p.s. bump this message if esi server online and bot still not work. CCP may change anything at any moment
