

Not getting trader to work after todays patch.

Posted by id_ - 2012/01/24 13:07

As topic says, your probably on it.. but i figured i'd mention it.
CCP remade the neocom, also first run hangs on the new eula message.

Hi Slav2,

there is a problem with the new beta release of the bot. When it update sell and buy orders it don't insert the dot (point) in the price and it result too high, fortunately it press cancel and after some seconds it continue with the next order.

The bot keeps getting 'desynced' while updating orders, according to the log. Most of the time it resyncs or whatever and moves on, but sometimes it gets stuck and repeatedly captures the screen in the log saying something about being desynced over and over.

It also seems to be having a problem with scrolling through the order list. It will move through the initial 10 or so orders and maybe scroll down once or twice, but will then say that it has completed the sell order list and move onto the buy order list, leaving most of the orders untouched.

Hi, please record log as described in my signature.

Usual problem with desynchronization is when user add two items with the same entered quantity to orders. Bot change one order and vertical position of these orders switched. Another reason may be resent patch. CCP claimed that they renamed some market items. They dont tell what items renamed, so we will have to find them. If you found list of renamed items let me know.

Also if you use VMWare you should tell, because VMWare may add numerous problems which should be solved differently.

Some of the item changes:

All EM missiles will now have the name 'Mjolnir'.

- All Thermal missiles will now have the name 'Inferno'.
- All Kinetic missiles will now have the name 'Trauma'.
- All Explosive missiles will now have the name 'Nova'.
- All scripts now carry the suffix 'Script' after their name. This affects Focused Warp Disruption, Optimal Range Disruption, Tracking Speed Disruption, Scan Resolution, Targeting Range, Optimal Range and Tracking Speed.
- Shield hardeners, Shield resistance amplifiers, Armor hardeners, Energized plating and Resistance plating will all have a new prefix based on the damage type. These new prefixes will simply be EM/Thermal/Kinetic/Explosive.
- Shield hardeners, Shield resistance amplifiers, Armor hardeners, Energized plating and Resistance plating which allow for multiple resist types will now carry the prefix 'Adaptive'.
- Modules and weapons for Capital, Battleships, Cruisers and Frigates will now show a size of XL, Large, Medium or Small for almost all items. Some exceptions will apply for named modules or X Large shield boosters for battleships. Unfortunately the list of all modules is much too large to fit into patch notes.

Since I don't expect you to drop everything and update all the items, would it be possible for you to provide a brief explanation as to how we can manually change the items names for the items we have market orders for? However if I'm misunderstanding the problem just ignore me I guess :x

I have version 4.1.5 installed and it still does not update buy orders. I am not sure why, I tried everything.

The decimal just does not work for me. I tried putting comma setting and period setting.

Same here, trader wont insert dot, and at least, it figures out , when typing 5 billion instead of five million buying order, he stops, for a few seconds, thinks...." hmm something s wrong here what am I up to " then cancels. or, I would be broke in zero time by now. I m sure Slav is working on the problem right as we speak

I m sure Slav is working on the problem right as we speakDo you use latest 4.1.6 version of the bot? If yes, try to tick new setting "Custom Decimal Char"

and define comma or period (dot) to use.
