

## API is broken.

Posted by sinsforeal - 2018/05/07 20:22

---

Slav, tell me. What are your plans in implenting the new esi api for autotrader. I just purchased another license and have my first license already running. I hope there is a timely response to this to avoid lost profit. As ccp has discontinued support for old api and attempting to go to the page gives a 404 while the autotrader is still running I suspect it is using outdated market info and I may stop it if it loses profit.

Came here to ask the same thing. Also, does anyone know of a wealth tracker that uses the new system?

API's are still working. At least for me it is.  
Deadline is tomorrow.  
As far i know Slav sayed there will be an Update.

Yes, the AutoTrader doesn't function anymore after DT API cutoff...getting data errors updating buy/sell orders.

Working on update. You may still use standard trader and old method to collect market export files to use with market analyzer.

=====

**Re: API is broken.**

---

Can confirm using market exporter->market analyzer->trader works OK. Plus, it will update the open orders created from AutoTrader. So, this seems like an OK, if not tedious workaround for the time being.

Slav, is there an ETA for AutoTrader update?

Thanks for your hard work on this tool.

>Slav, is there an ETA for AutoTrader update?

Corresponding to bitcoin price graph, the work may be finished in less then 12 h :)

Slav, can you add a function to export price for orders in market analyzer via ESI? Right now doing so with API export results with an error.

Public ESI API is not difficult. Authenticated API is complicated although. I need examples how to use it.

Here is an example of a program, when you create a new character it sends to Esi can tell the idea.

Would pulling down market analysis in the analyzer be an example of public usage of ESI? A release with that first would soothe the natives waiting for a full implementation using scopes needing authentication.

Fixed market analyzer in test version

Get an unhandled exception when trying to run that test version. Where we meant to test it?

'Sequence contains no elements'

=====

**Re: API is broken.**

Posted by blueronin - 2018/05/09 23:18

Test version works OK here. Successfully pulled down items in the analyzer via API and am running through updates and orders now.

Almost cleared 2 bil today. Looks like with all the other bots incapacitated, my profits are great. Feel free to take all the time you need Slav! :silly:

'Sequence contains no elements'

At first make sure you have .Net 4.5.2 installed. When this error appears, when you start creating history file or export with API?

Does not work for me. Net 4.5.2 is installed as well as the EP Market Analyzer fixed version. I start the Market Analyzer, It says no export file: activate the function, but market analzzer function is already enabled. Then i try 'Export History (API)' but EP crashes :(((

When is a fixed Autotrader expected to be released?

Thx Slav

Screen your MA settings and messages you get and send to me. I will try to reproduce your problem using your settings.

Then open data folder of the bot: menu->tools->data folder and erase its content. Then start bot again.

>When is a fixed Autotrader expected to be released?

Use standard trader now. Working on authenticated API now, but have no ETA.

Can someone for the love of god explain step-by-step how to use the manual trader in the test version please?!

I open the market analyzer and the buttons are not named the same as in the FAQ guide, there are two buttons that both say 'Show Result'....I have set up the analyzer settings, created an Export History (API) file, I then click the right hand 'Show Result' button and the analyzer loads up about 7000 odd items but displays no avg. volume, no total profit, no competitors and no probable income - is this correct at the moment because of no API? ....so from here what do I do, I can't seem to filter the results as there is no data to filter against, apart from buying, selling and profit(%).....?!

The analyzer keeps coming up saying that there is no export market history file and I can't seem to create one either....?!

I'm probably not the only one thinking it but the FAQ isn't really fit for purpose and doesn't explain how you 'actually' use the standard trader....maybe this could be addressed whilst we're all being forced to use manual trader instead of autotrader????

Thanks!

You need to generate market history file first. Working method is to use old market exporter and tick update history data

[http://www.macrolab-online.com/knowledgebase/scr/images/market\\_export\\_settings.png](http://www.macrolab-online.com/knowledgebase/scr/images/market_export_settings.png)

Add required items to the list, disable trade function and order installers. Run.

Then open market analyzer, define region, station and use show result button w/o (API). Maximize/increase size of MA window to see text on buttons.

[https://www.macrolab-online.com/kuploads/images/show\\_result.jpg](https://www.macrolab-online.com/kuploads/images/show_result.jpg)

I'm probably not the only one thinking it but the FAQ isn't really fit for purpose and doesn't explain how you 'actually' use the standard trader....maybe this could be addressed whilst we're all being forced to use manual trader instead of autotrader???? If standard trader is too complicated, use courier, level standings for a while. Trader license is accepted by courier atm. Manual will be updated after I finish patching of the bot. Some controls like API keys will be removed from AT.

Thanks for the quick reply Slav - I didn't realise you had to actually run Eve to make the file (I'm stupid!) - I will try this now, thanks again!

(3032) >>>Exception Object reference not set to an instance of an object.  
at ..(Int32 , Int32 , Int32 , Int32 & , DirectoryInfo , Int64& , Int64 , Int64 ), Func :  
SELL ORDER ERROR: ERROR DURING ORDER DATA EXPORT

AT say this in log

=====

### Re: API is broken.

Posted by SpaceCadet - 2018/05/12 18:27

---

AT doesn't work at the moment - because API isn't a thing anymore. Use the license for courier or something instead, or do as I have done and wrestle with manual trader....think I'm actually making headway with manual trader now #everycloud

A lot of time it takes, would Yoda say.
