AutoTrader no longer updating orders
Posted by excalibur - 2019/05/21 05:11

_____

Since today my trader is no longer updating orders. It tries to but it thinks its already at the top. The console says the following :

-No competition for this sell order 0 sell/buy orders found

I attached the complete log.

Do you know why this is happening? https://www.macrolab-online.com/kuploads/files/9-20190521.txt

_____

I am pretty sure it had to do with the latest patch.

==

Re: AutoTrader no longer updating orders
Posted by Slav2 - 2019/05/21 09:27

_____

ESI API is up but not functioning:

Main, alt links worked yesterday, today shows nothing:

Alt1, Alt2, Alt3

I did not want to use alt links, better to wait while api is up again.

Use standard trader, it is not using any sort of API.

—————————————————————

@SLAV2
I saw that this issue happend recently, but for me it not happend till today when i restarted the bot and made the "update" from you, so in my case it is not a api issue it is a bug in the new update from macrolaps, cause else it would not stop working for others earlyer and for some later, could you please

check if maybe the update from macrolap side broke something ?
i mean you wrote in patchnote that you fixed something in autotrader items thingy, maybe you broke it
then, no offence just a thinking.

==

Re: AutoTrader no longer updating orders
Posted by Slav2 - 2019/05/21 20:56

_____

Remember general rule, when update is major (version changes in first or second number e.g.
9.3.0->9.4.0) you should redo first run. Must redo in case of errors. Otherwise it is minor update and first
run is NOT required.

Redo first run just in case, record log file as per link in my signature and send it to me. Don't use AT
now, it is not functioning as intended due to API maintenance.

==

Re: AutoTrader no longer updating orders

_____

How long do you think they will fix the api? It seems Evenus and Jssasset are receive data from CCP

ESI just fine.

I tried the manual trader, it is too complicated for me at the moment /facepalm. The whole reason to use AT is the simplicity haha.

==

Re: AutoTrader no longer updating orders

_____

Could you explain to me how i can use alt API's? I bought the package for autotrader and would like to be able to use it.

==

Re: AutoTrader no longer updating orders
Posted by Slav2 - 2019/05/23 00:46

_____

>Could you explain to me how i can use alt API's?
CCP does not advertise working links atm. Standard trader is the only way to trade now.

>It seems Evenus and Jssasset are receive data from CCP ESI just fine.
Just checked, there were no changes in evernus source code since last year.

_____

@Slav - it looks like they way you are forming your request is no longer valid

https://esi.evetech.net/latest/markets/10000003/orders/

works fine

Your example above does not have the /latest/ part in.

==

Re: AutoTrader no longer updating orders
Posted by Slav2 - 2019/05/23 02:28

_____

How many records do you see using this link? I see just some demo (1 order).

==

Re: AutoTrader no longer updating orders
Posted by whome - 2019/05/23 04:51

_____

https://esi.evetech.net/latest/markets/10000043/orders/?datasource=tranquility&order_type=sell&page=1
2

returns a page full of results and is page 12 of those list of results

I'm not an expert and I'm just trying to help, but it looks like the ESI is up and running.

Calls have to have to include /latest/ /dev/ or /legacy/

Maybe previously if this was left out it defaulted to latest, but the response with out that switch gives a
"Not Found", which is documented on the ESI pages as a 404. As I say, I'm just trying to help. :-)

_____

Also if you upgrades from previous version (9.3.x) and did not redo first run bot will not work. Check that theme in game is is Dark Matter theme. No windows are half transparent, all windows are black. "Siting and doing nothing" means bot is not tuned yet.

==

i reinstalled the bot, redone first run and nothings helped. market history file downloads in 10 seconds and when the bot launches it just sits there doing nothing on startup.

_____

problem still occuring for me.

bot starts up, loads eve, sets station, opens market, exports current buy sell orders then just sits there and does nothing else after that.

doesnt update current buy/sell order, install new sell orders or search for new items to buy.

==

Re: AutoTrader no longer updating orders
Posted by Slav2 - 2019/05/23 09:24

_____

I afraid there is something to do with error limits introduced by CCP. I am working on new version of the AT which will check connectivity to API server first and errorLimits. If API server is on maintenance or

errorlimit is lower then 90, bot will not try to connect to server to not decrease errorlimit counter. AT will update orders w/o API calls during this time till API maintenance ends.

Re: AutoTrader no longer updating orders
Posted by daywatch - 2019/06/14 01:59

_____

is it possibility to make as that with autotrader?

download the price of all item_id for all region for sell and buy order

find the order the less expensive for each item_id for the sell order

find the order the most expensive in the new eden for each item_id for buy order

calculate with quantity and difference of the price the benefits to go on a station buy an item_id and go out on an other station to sell the item directly?

because for a moment a guy made a programm and invite me to find trade hauling sometimes we made benefits at more than 100 Millions and even more at just 10 jumps or less and on a direct selling because someone made sometimes some mistake and sell item really at a low price so we can buy it and sold it in a station with a players who buy the item more expensive than it is really

Re: AutoTrader no longer updating orders
Posted by Slav2 - 2019/06/19 21:26

_____

Need to check log file to not guess what is wrong.

If you trade in other then Jita system, autotrader may find no items to trade and you need to use standard trader with manually selected items to trade.

In Jita, there is a bug with ESI API. I still did not get it. Sometimes AT downloading cropped info about regional orders (~10% of total) and bot fails to find any items to trade. We experimented and found no errors. Status is OK (http code 200), error limit is also OK. Looks like need to knock API server to the head to make it working again.

Try to open in browser links:

Link1
Link2
Link3

Also use my markethistory.xml file. You can unpack and drop it to bot's data folder. To open data folder use menu->tools->data folder button.
