Dont run bot unattended. This is beta version.

Starting from 7th December old eve launcher will move to the history. This bot version works with new eve launcher
New eve launcher updated daily now, so bot is also updated. If you installed this update and something did not work,
please report.

About proxifier/VPN. If you hide your IP address you may leak host IP when you install new eve launcher. To avoid this
open firewall (wf.msc) and set outgoing connections from "allow" by default to "block". Add a rule to allow outgoing connections
from proxifier or VPN exe file. Remove other ougoing rules to public networks. Without outgoin rules you may see internet icon as not available.
Just open browser and test internet connection here. I have tried to add DHCP/DNS rules but this do not fix the problem with icon.

About first run. If you had first run finished you dont need another first run. If you start new first run, you may see
blue tooltip about daily reward in bottom left corner of eve window. Pause bot (control+p), open daily rewards
and untick show on login, close window and unpause bot. I will work on this problem later. If you continued and
see this tooltip, pause bot, open daily reward window and tick not to show daily rewards on login.
Close eve, switch to bot. In menu->tools->find eve setting operations button, click it then click "copy settings locally" button.

Bot will use eve launcher in compact mode. Bot will not change or erase current launcher settings.
You setup launcher before you start bot, add characters, define profiles.
Then reduce width of a eve launcher window to set compact mode and select position of it on desktop.

I did not test how bot works with other then first account in the launcher.
