

It just login and do nothing

Послан iceunit - 17.08.2011 07:39

After i updatet to 3.12.3.0 i have run a complete first run and when i start it up it login and then its just sitting in station doing nothing ??

Check the Fleet and 0.0 areas and make sure they are not enables (especially the timeout).

You might also want to send Slav2 a log.

Same problem for me, stays in station all the time after a complete first run.

Disable local check. How to check local if only one character is visible in local? Guys, in order to use local checks you must expand local window till full height and you can do this during first run wizard only (check shared settings->first run wizard->expand pnp and local chat and rerun first run wizard).

I had same problem after update. (even log file looked just like posters log.)

1. I made backup from my license files.
2. Downloaded latest version of eve pilot.
3. Uninstalled old and installed latest eve pilot.
4. reinserted license files.

Now everything works like before.

Sorry my bad english ;)
