

Can not get any version of the Hunt bot to run

Послан armyruss79 - 01.11.2020 12:57

I need help. It keeps crashing at various stages. I have re-installed the software 10+ times deleted all the data files; performed first run every time. I have tried anomlyHunter and BeltHunter. I will not run FW-hunter as it got me banned 18months ago.

Is there a detailed tutorial on how to set this up? I have been at it for over 24hrs. I am a little frustrated. The Courier Bot and Mining bot is way simpler than this

Taken from here

- 1) Create bookmark of a station with name 0-Station
- 2) Define anomaly bookmark name as 1-Anomaly in settings. Don't create it manually.

There are not so much details to explain to make tutorial "detailed"

Thanks for the fast response! I'll give it a try! Also; Should I be searching for Anomalies by ID?

You should setup bot as per manual. You can define keywords to prioritize or skip some anomalies

Послан armyruss79 - 02.11.2020 14:00

I am now having issues with the script not attacking the NPC's. It will not use the turret nor deploy drones. The turret is set in the fittings module section with priority 1, ammo is set properly. The drones are set by type and amount. the script is finding the anomaly and then warping to the anomaly. It is activating the auto target module and the invul field mod. The script then sits out the timer without attacking the NPC's then warps back to station re-arms ammo and rinse repeats.

Послан Slav2 - 05.11.2020 00:48

Hi, please check distances (attack distance, lock distance). Check that distances measured in meters (not km). If bot does not attack NPC it is waiting while NPC get closer.
