

Alfa Gila buys modules and implants randomly

Послан GillyBilly - 08.04.2022 18:19

During the run the bot will buy modules and implants again, as if it died, even though it is still alive, and fully functional. I have an extra set of every module and implant

Bot does not know what is fitted to ship. If bot started fit check (can be started in case of any error) it will purchase another set of items.

Does the corax preset do that as well? I don't recall it doing that.

Corax fit has no drones and problem with drone window resulting to fit check initiation.
