

Tactical Destroyers

Послан Pronator - 08.08.2021 05:25

I'm unable to find any mention in the forums for "Tactical Destroyer" search so please show me if this question has been asked already,

But,

Why can the bot not work with TacDes? Confessor, Svipul etc?

Would be a complete gamechanger for Dessie running ...

Because to properly write and test bot you need a farm of bots. Where can I take those tactical destroyers accounts? :)

Atm bot works with worm and gila, hawk (assault damage control) will be added later. Anything else may be used but you have to test everything on your own

Ok. I just had a thought anyway - I will disable the grouper weapons option. I think the boy is trying to group weapons and that is where it hangs.

Bot has no problems to group weapons. Make sure eve is started with 1024*768 resolution. If not you may need to increase desktop resolution
