

how profitable is AT now?

Послан armyruss79 - 12.04.2019 19:23

With current state of Eve Online having a 50% population dump over the last year how successful is AT? I'm guessing the bot trader population is over running Jita and they just battle each other?

What would be the expected ROI on 5bil isk with amazing social/trader skills and appropriate 10/10 standings?

I ultimately need to fund 3-4 accounts worth of PLEX. Ideal situation if implemented will consist of the others mining high sec and selling ore to feed the Trader for more capital to invest.

I advertise 5% of a funds/day as guaranteed income for wallets below 30kkk.

And how many hours would you advice to use the bot a day?

This is ultimately up to how much risk/reward/ban ratios you're willing to put yourself up for. I personally run two hours a day and make anywhere from 100-300mil depending on how fluid the market is.

I know some people that are much mor aggressive and come away with fractionally higher payouts.

CCP have banned me 3 times over the last couple of years, but I'm an aggressive sort of cancer. I just won't go away.

How much time average player spend for a game? Use this and avoid problems.

I advertise 5% of a funds/day as guaranteed income for wallets below 30kkk.

This is valid for 12h run. If you just install/update orders once a day, you will get about 1.5%/day.

30 000 000 000 of cause. With 30 mils you better not use AT at all.
I pointed out range (0-30 kkk) where AT works and show stable income. More then 30 bills will require standard trader and manual item selection.

I'm gonna need a detailed tutorial on how to effectively run the Trader types to see which is best for what I want to do. My courier is running up Caldari Factions and should be ready in another week or 2.

Test version of the bot has courier interface added to the autotrader alhorithm. Bot may do courier missions periodically. Interface has no settings but periods trader and courier runs. Switch to courier UI to edit courier part settings.

Autotrader may be used with default settings, just set the number of orders you want and fees.

That's an interesting addition thanks for posting that. If you had 12bil isk available which trader model would you recommend? Settings?

Set default settings as here:

http://www.macrolab-online.com/knowledgebase/scr/images/auto_trader_settings.png

Additionally define real brokers fee and sales tax, max orders to use = 100, define yours margin trade skill level. Tick exclude SKINs. Wealthy trader mode is necessary if you see that bot does not distribute all ISKs after two weeks. First few days may be skipped from any profit checks as bot will need to adjust limiting prices for used items.

Re: how profitable is AT now?

Послан armyruss79 - 30.04.2019 10:28

for max orders; I can have 273. Should i only set it to 50? 273 sounds complicated and I only have 1bil isk to start with. As I get more isk available should i increase the max orders?

Re: how profitable is AT now?

Послан Slav2 - 30.04.2019 11:30

Start from 50 orders, as soon as bot install 2/3 of orders restart bot with 100 orders. This way bot will not install so many small orders.

EDIT: Based on jeveassets, in 14 days wallet went from 500M to 2.5B then down to 2B for the last 7 days (21 days total).

Total asset went from 3B to 5.5B in the same time but these are not ISK I can use, so wallet would be my main evaluation criteria.
